

Silvus announces new Phase I SBIR contract to develop Spatial Interference Mitigation Techniques for the SRW Waveform

Los Angeles, Calif., July 18th 2013 — Silvus Technologies Inc. a leading developer of mesh networked Multiple Input Multiple Output (MIMO) radio products for tactical and commercial applications has been awarded a research and development contract from CERDEC to design and build spatial interference mitigation methodology for the SRW waveform. Silvus Technologies will demonstrate the feasibility of the techniques via simulations using reference channels and waveforms available from the JTRS Information Repository. The total dollar amount of the award is about \$747K.

About Silvus Technologies

Privately held and headquartered in Los Angeles, Silvus Technologies develops complex MIMO technologies that are expected to reshape broadband wireless connectivity worldwide. Backed by an unmatched team of PhD scientists and design engineers, its technologies provide enhanced wireless data throughput, wireless interference mitigation, anti-jamming, spatial cancellation, and improvement of Quality of Service (QoS) for the support of critical video and data transmissions.
