Silvus Technologies wins 2014 News Technology Award

Baltimore, MD – Oct. 10, 2014 – NewBay Media has announced that Silvus Technologies' StreamCaster Series of MN-MIMO radios has been selected as a winner of its prestigious News Technology Award. The awards were announced at the News Technology Summit, presented by TV Technology and Broadcast and Cable.

NewBay Media's News Technology Awards are judged by a panel of engineers and industry experts on the criteria of innovation, feature set, cost efficiency and performance in serving the industry. "News is an important part of the media landscape and the recipients of NewBay Media's News Technology Awards represent the best in innovation and performance," said Eric Trabb, group publisher of TV Technology. "We are proud to recognize these companies."

StreamCaster was also a winner of an NAB 2014 Best of Show Award, presented by *TV Technology* magazine, making Silvus Technologies one of a very select group of innovative companies to win both awards.

All StreamCaster radios feature Silvus' MN-MIMO (Mobile Networked MIMO) technology to provide unprecedented throughput, range, and robustness, especially in challenging scenarios involving mobility, non-line-of-sight (NLOS) operation, and interference. StreamCasters support bi-directional connectivity for one or more cameras over a single RF channel for program and return video and audio, metadata, comms and remote control.

StreamCaster radios join together to form a self-healing mesh network, for automated, on-channel signal relays and feature data rates up to 85Mbps for transmission of multiple HD video feeds over a single RF channel.
